

## Adesso Launches Gyraton Security Solutions

*Rebrands Gyraton to security-based solutions – cameras and network video recorders;  
All Gyraton cameras and network video recorders are NDAA compliant with select models also being TAA compliant*

Walnut, Calif. – July 1, 2021 – [Adesso® Inc.](#), a leading manufacturer and supplier of computer peripherals to schools, corporate entities, and the government, announces the launch of [Gyraton®](#) security solutions. All Gyraton products are compliant with the National Defense Authorization Act (NDAA), allowing the cameras to be installed on federal properties or properties of federally funded entities. Select models are made in Taiwan and compliant with the Trade Agreement Act (TAA), therefore available for U.S. federal government purchase.

The Gyraton product line will initially include bullet, dome, and turret-style cameras, ranging from 2MP, 4MP, and 8MP, as well as 4, 8, 16, and 32-port network video recorders (NVRs). The Gyraton products come with a free monitoring app for smartphones, tablets and desktop computers. Gyraton will introduce, in the near future, a Video Surveillance as a Service (VSaaS) that will provide an interface between edge computing and the cloud access to your security system.

“We are excited to announce the rebranding of Gyraton to provide professional security solutions,” said Allen Ku, president of Adesso. “Gyraton security solutions is a natural outgrowth of Adesso’s experience designing cutting-edge webcams and document cameras, and Gyraton’s experience with user-interface devices. Gyraton’s CyberView products are the first new products since we acquired the brand and introduces Adesso to the security industry.”

Gyraton security cameras are designed for indoor or outdoor applications. The cameras, from basic to intelligent models, come equipped with fixed or varifocal lens options to capture various viewing angles based on surveillance needs. Intelligent camera models come with smart perimeter protection, including crossline, intrusion, enter/exit area; as well as face capture. Wide Dynamic Range (WDR) technology allows the cameras to capture crisp and clear images in most lighting environments. Each camera also has a built-in Micro SD slot for edge storage.

Gyraton NVRs offer high-quality recording for your surveillance needs, providing 4K resolution; Ultra 265/H.265/H.264 compression; simultaneous HDMI and VGA output; and supporting Gyraton’s VSaaS.

“With Adesso’s understanding of video cameras, video surveillance is a logical extension to its existing production lines,” said Oliver Zhang, vice president of sales and marketing for Gyraton. “As the surveillance market heads toward cloud technology and artificial intelligence, we see a much greater need for secure video surveillance. Being a long-time supplier to the government sector, Adesso’s familiarity with federal regulations and its experience in product design and supply chain management will help alleviate these concerns.”
